

Dear Members of the Energy and Technology Committee,

This is an email in support of HB 6242, An Act Prohibiting Surcharges from Being Levied on Utility Customers to Subsidize Interstate Natural Gas Pipeline Capacity.

And developer of transporting natural gas, not the customer needs to take all the financial risk of conveying a gas that will not be usable in 30 years due to the climate crisis. I would rather see surcharges on renewable energy development going directly to grid, generation, and storage of renewable energy. Currently, 100% renewable electricity in Eversource service territory is the cheapest power we can buy.

Kind regards,

**Greg Arifian** | Site Manager, PE
